

facebook performance report

Facebook Page · August 2026, compared against July 2026, June 2026

Data source	facebook_export_2026-06.csv, facebook_export_2026-07.csv, facebook_export_2026-08.csv, facebook_segments_2026-08.csv
Currency	USD
Prepared	2026-09-30

Executive summary

VIEWS	ENGAGEMENT RATE	NET FOLLOWER GROWTH	LINK CLICKS	REVENUE
12,401,581 ▼ -7.91% vs. July 400,051/day / day	1.96% ▲ +0.13pt vs. July	3,708 ▼ -1.62% vs. July 119.6/day / day	31,114 ▼ -3.87% vs. July 1,004/day / day	\$3,968.51 \$128.02/day / day

Key findings

- Engagement rate rose to 1.96% in August, up 0.13pt from July's 1.83% and 0.13pt from June's 1.83%, even as reach declined — see [Performance Table](#) and [Engagement Rate Trend](#).
- Views and Reach both fell 7.9% versus July (a like-for-like 31-day comparison), the largest decline of any metric this period — see [Performance Table](#).
- Raw Interactions (+0.8%) and Net Follower Growth (+1.2%) look higher versus June, but June is a 30-day month against August's 31 — on a per-day basis both metrics actually fell (-2.4% and -2.1% respectively). See [Performance Table](#).
- Reels drove disproportionate value: 33% of views but 44% of interactions and 44% of revenue, with the highest engagement rate (1.83%) and revenue-per-1,000-views (\$0.43) of any format — see [Content Format Breakdown](#).
- CTR could not be computed for any of the three months because none of the supplied exports included an Impressions column — see the data notes in the Glossary at the end of this report.

Performance Table — August vs. Trailing Two Months

Metric	August 2026	July 2026	June 2026
Views (Total)	12,401,581 ▼ -7.91%	13,466,434	13,195,187
Views (Per Day)	400,051.0 ▼ -7.91%	434,401.1	439,839.6
Unique Viewers / Reach (Total)	8,681,092 ▼ -7.91%	9,426,492	9,236,618
Unique Viewers / Reach (Per Day)	280,035.2 ▼ -7.91%	304,080.4	307,887.3
Interactions (Total)	170,003 ▼ -1.25%	172,156	168,585
Interactions (Per Day)	5,484.0 ▼ -1.25%	5,553.4	5,619.5
Engagement Rate (Interactions ÷ Reach)	1.96% ▲ +0.13pt	1.83%	1.83%
Gross Follows (Total)	5,510 ▼ -1.24%	5,579	5,478
Gross Follows (Per Day)	177.7 ▼ -1.24%	180.0	182.6
Unfollows (Total)	1,802 ▼ -0.44%	1,810	1,814
Net Follower Growth (Total)	3,708 ▼ -1.62%	3,769	3,664
Net Follower Growth (Per Day)	119.6 ▼ -1.62%	121.6	122.1
Link Clicks (Total)	31,114 ▼ -3.87%	32,368	33,613
Link Clicks (Per Day)	1,003.7 ▼ -3.87%	1,044.1	1,120.4
Page Visits (Total)	Unavailable	51,754	54,268
Page Visits (Per Day)	Unavailable	1,669.5	1,808.9
CTR (Link Clicks ÷ Impressions)	Unavailable	Unavailable	Unavailable

Content Format Breakdown — August 2026

Format	Views	Share of Views	Interactions	Share of Interactions	Engagement Rate	Revenue	Share of Revenue	Revenue / 1K Views
Photos	6,200,790	50.00%	71,401	42.00%	1.15%	\$1,865.20	47.00%	\$0.30
Reels	4,092,521	33.00%	74,801	44.00%	1.83%	\$1,746.14	44.00%	\$0.43
Text	992,126	8.00%	8,500	5.00%	0.86%	\$198.43	5.00%	\$0.20
Live	1,116,142	9.00%	15,300	9.00%	1.37%	\$158.74	4.00%	\$0.14
Total (August)	12,401,579	100.00%	170,002	100.00%	1.37%	\$3,968.51	100.00%	\$0.32

Visual analysis

Exhibit 1 — Engagement Rate Trend (Interactions ÷ Reach)

Engagement rate climbed to 1.96% in August, up 0.13pt from July — see [Performance Table](#).

Exhibit 2 — Views per Day by Month

Daily views fell to 400,051/day in August, the lowest of the three months and down 7.9% from July — see [Performance Table](#).

Exhibit 3 — Daily Views — August 2026

August 16 posted the month's peak at 508,993 views, roughly 27% above the daily average, while August 8 was the month's low at 293,865.

Exhibit 4 — Engagement Rate vs. Industry Benchmark

At 1.96%, August's engagement rate is well above the ~0.15% Facebook Page default benchmark (Quid/Rival IQ 2026, see Glossary for source).

Analysis

Reach softened in August: Views and Viewers both fell 7.9% against July, a directly comparable 31-day month, and Link Clicks fell 3.9% over the same window (see [Performance Table](#)). This is the clearest negative signal in the month and the driver behind the page's lower raw totals across nearly every volume metric.

Despite the smaller audience, the audience that remained engaged more, not less. Engagement rate (interactions ÷ reach) improved to 1.96%, its highest of the three months, and sits well above the ~0.15% Facebook Page benchmark (Quid/Rival IQ 2026) shown in [Engagement Rate vs. Benchmark](#). Facebook's organic reach and engagement are structurally low platform-wide, so this account is performing far above the category default even in a down month for reach.

June's shorter 30-day span masks the true trend for two metrics: raw Interactions and Net Follower Growth both read as slightly *up* versus June ([Performance Table](#)), but once normalized to a per-day rate, both are actually down roughly 2–3% — consistent with the same reach softening seen against July, not a genuine June-to-August improvement.

Content mix explains part of the resilience in engagement quality. Photos still carry the most raw views (50% of the month), but Reels convert far more efficiently — 33% of views yet 44% of interactions and 44% of revenue, with the best per-format engagement rate and RPM in [Content Format Breakdown](#). A single day, August 16, also stands out in [Daily Views — August 2026](#) as the month's peak, roughly 27% above the daily average.

Recommendations

HIGH

Shift publishing mix toward Reels

Reels produced 44% of August interactions and 44% of revenue from just 33% of views, with the highest engagement rate (1.83%) and RPM (\$0.43/1K views) of any format — see [Content Format Breakdown](#). Increasing Reels cadence relative to Photos is the single highest-leverage lever visible in this month's data.

HIGH

Investigate the reach decline before assuming it's seasonal

Views/Reach fell 7.9% against July on a like-for-like day-count basis — the largest move in the report ([Performance Table](#)). Check for algorithm changes, posting-time shifts, or a paid-boost pullback between July and August before treating this as normal month-to-month noise.

MEDIUM

Set September targets from per-day rates, not raw totals

September has 30 days versus August's 31. A straight rollover of August's raw 12,401,581 views would overstate a realistic September target; use August's per-day rate (400,051 views/day, see [Performance Table](#)) and multiply by 30 instead.

MEDIUM**Restore Impressions and Visits to future exports**

Impressions was absent from all three months' exports, making CTR impossible to compute at all this quarter, and Visits was present in June/July but missing from August's file. Both are needed to track link-click efficiency and on-page traffic going forward — see the Glossary data notes.

LOW**Keep tracking the engagement-rate improvement**

Engagement rate has now risen for two consecutive months (1.83% → 1.83% → 1.96%, [Engagement Rate Trend](#)) even as reach declined. Confirm in September whether this holds once the Reels mix shift (Recommendation 1) is applied, to separate a genuine content-quality gain from a one-off effect of August 16's spike.

Glossary

Definitions

Views

Total number of times content from the Page was displayed, summed across all days in the period.

Unique Viewers / Reach

Number of unique people who saw Page content at least once during the period (Facebook export field “Viewers”).

Interactions

Reactions, comments, and shares on Page content, summed across the period.

Engagement Rate

Interactions divided by unique viewers (reach), not by total follower count, because no follower-base total was supplied.

Net Follower Growth

Gross Follows minus Unfollows for the period.

CTR

Link Clicks divided by Impressions. Unavailable this period — see data notes.

RPM / Revenue per 1K Views

Segment revenue divided by segment views, scaled to a per-1,000-views rate, used to compare monetization efficiency across content formats.

Derived measures

Measure	Formula
Engagement rate (%)	$\text{Interactions} \div \text{Unique Viewers (Reach)} \times 100$
Per-day rate	$\text{Period total} \div \text{days in period}$
Share of period total (%)	$\text{Segment value} \div \text{period total for that metric} \times 100$
Change vs. comparison period (%)	$(\text{current} - \text{prior}) \div \text{prior} \times 100$, suppressed if prior < 50
Change, already-percentage metrics (pt)	current – prior, stated in percentage points
Revenue per 1K views	$\text{Segment revenue} \div \text{segment views} \times 1,000$

Benchmark sources

Facebook Engagement rate (interactions ÷ reach): ~0.15% — Quid/Rival IQ 2026 Social Media Industry Benchmark Report

Data notes

- August’s export (facebook_export_2026-08.csv) did not include a Visits column, which was present in both June’s and July’s exports. Visits is marked “Unavailable” for August and no change comparison is shown against it.

- None of the three months' exports included an Impressions column, so CTR (Link Clicks ÷ Impressions) could not be computed for any period and is marked "Unavailable" throughout.
- Content-format and revenue data were supplied only for August (facebook_segments_2026-08.csv); no equivalent breakdown was supplied for June or July, so segment-level trends aren't available and the Revenue figures have no prior-period comparison.
- The August segment file's totals reconcile closely to the daily export's monthly totals (Views off by 2 of 12,401,579, Interactions off by 1 of 170,002), consistent with per-segment rounding in the source export rather than a data-quality issue.
- No total follower/audience-size figure was supplied (only daily gross Follows and Unfollows), so Engagement Rate is computed against unique viewers (reach) rather than total followers, matching the benchmark's own denominator.
- No ad spend data was supplied, so ROI / cost-per-result metrics are omitted from this report.
- Currency for Revenue is assumed to be USD; the export did not state a currency explicitly.
- The supplied exports did not include a Page/account name; this report uses a generic label in the header.
