

Instagram performance report

Northbridge Coffee · 2026 year-to-date (6 of 9 months reported), compared against the 6 reported months of 2026 (Jan, Feb, Mar, May, Jun, Aug)

Data source	Instagram Insights daily exports: Jan, Feb, Mar, May, Jun, Aug 2026
Currency	N/A — no monetization data supplied
Prepared	September 30, 2026

Executive summary

REACH (6-MO TOTAL) 28,805,906 ▼ -6.1% Aug vs. Jun–May avg/day 158,274 / day	IMPRESSIONS (6-MO TOTAL) 46,026,494 ▼ -8.8% Aug vs. Jun–May avg/day 252,893 / day	INTERACTIONS (6-MO TOTAL) 588,799 ▼ -8.2% Aug vs. Jun–May avg/day 3,235 / day	ENGAGEMENT RATE (YTD) 2.04% ▼ -0.045pt Aug vs. Jun–May avg	NEW FOLLOWS, GROSS (6-MO TOTAL) 17,076 ▼ -5.6% Aug vs. Jun–May avg/day 94 / day
---	---	---	---	---

Key findings

- Engagement rate (Interactions ÷ Reach) was remarkably stable, staying between 2.00% and 2.09% in every one of the six reported months — see [performance table](#) and [Exhibit 3](#).
- Reach/day fell 22.3% from January (179,962/day) to August (139,765/day), and impressions/day fell a similar amount — the decline is in distribution, not audience engagement quality (see [Exhibit 1](#)).
- August's per-day rates for reach (–6.1%), impressions (–8.8%), and interactions (–8.2%) all came in below the May–June average, reversing June's partial rebound (see [performance table](#)).
- This is a 6-month total, not a full-year figure: April, July, and September exports were not supplied, so all year-to-date totals in this report cover only January, February, March, May, June, and August.

Month-by-month performance, 2026 (Jan–Sep)

Month	Reach	Impressions	Interactions	Engagement Rate (Int. ÷ Reach)	Profile Visits	New Follows (gross)
January	5,578,831 (179,962/day)	8,992,211 (290,071/day)	111,911 (3,610/day)	2.01%	65,544 (2,114/day)	3,306 (107/day)
February	4,850,134 (173,219/day) ▼ -3.7%	7,802,149 (278,648/day) ▼ -3.9%	99,013 (3,536/day) ▼ -2%	2.04% ▲ +0.035pt	55,698 (1,989/day)	2,902 (104/day)
March	4,971,984 (160,387/day) ▼ -7.4%	7,887,723 (254,443/day) ▼ -8.7%	103,146 (3,327/day) ▼ -5.9%	2.07% ▲ +0.033pt	57,238 (1,846/day)	2,970 (96/day)
April	Unavailable	Unavailable	Unavailable	Unavailable	Unavailable	Unavailable

August	4,332,712 (139,765/day) ▼ -10.8%	6,764,687 (218,216/day) ▼ -14.7%	87,449 (2,821/day) ▼ -13.8%	2.02% ▼ -0.071pt	49,719 (1,604/day)	2,563 (83/day)
September	Unavailable	Unavailable	Unavailable	Unavailable	Unavailable	Unavailable
Total (6 months reported)	28,805,906 (158,274/day)	46,026,494 (252,893/day)	588,799 (3,235/day)	2.04%	332,236 (1,825/day)	17,076 (94/day)

Visual analysis

Exhibit 1 — Reach and impressions per day, 2026

Reach/day fell from ~180K in January to ~140K in August (–22.3%); impressions/day tracks the same shape, confirming a distribution decline rather than a measurement quirk in one metric. See [performance table](#).

Exhibit 2 — Interactions per day, 2026

Interactions/day declined roughly in step with reach (–21.9% Jan→Aug), which is why engagement rate stayed flat — see [Exhibit 3](#).

Exhibit 3 — Engagement rate (Interactions ÷ Reach), 2026

Engagement rate held inside a narrow 2.00%–2.09% band across all six reported months — the reach decline in [Exhibit 1](#) is a distribution issue, not a drop in audience quality.

Exhibit 4 — New follows (gross) per day, 2026

Gross new-follows/day softened from ~107/day in January to ~83/day in August, moving with reach; no total-follower figure was supplied so this cannot be converted to a net growth rate (see the glossary's data notes).

Analysis

Northbridge Coffee's Instagram account shows a consistent downward drift in top-of-funnel reach and impressions across the six reported months of 2026, while engagement quality held steady. Reach/day dropped from 179,962 in January to 139,765 in August, a 22.3% decline (see [performance table](#) and [Exhibit 1](#)). Impressions/day moved almost identically, which points to reduced distribution — fewer accounts seeing the content — rather than a change in how compelling the content is once seen.

That distinction matters because engagement rate ($\text{Interactions} \div \text{Reach}$) never left a 2.00%–2.09% band all year (see [Exhibit 3](#)). If falling reach were being driven by weaker content, engagement rate would typically fall too, since a less compelling post usually converts a smaller share of the people who do see it. Instead, the content is converting viewers at a consistent rate — the problem is fewer viewers, consistent with an algorithmic distribution or posting-cadence change rather than a content-quality one.

June was the one month that broke the downward trend, with reach/day, impressions/day, and interactions/day all rising 11–15% over May (see [performance table](#)). That gain did not hold: August's per-day rates for the same three metrics are back down 8–11% below the May–June average [shown in the KPI cards above](#). Without July's export, it isn't possible to tell whether August's dip is a continuation of a slide that started right after June, or a sharper single-month drop — that gap is the single biggest limitation on this report's August-vs-recent-trend read.

Gross new-follows/day moved in the same direction as reach all year, from 107/day in January to 83/day in August (see [Exhibit 4](#)). No total-follower count was supplied for any month, so this report cannot state a net follower-growth rate or a followers-based engagement rate — only the gross daily follows figure, which is a one-directional count and does not net out unfollows.

Recommendations

HIGH

Diagnose the reach/impressions decline, not engagement

Since engagement rate has stayed flat at ~2.0–2.1% while reach/day fell 22.3% Jan→Aug (see [performance table](#)), prioritize investigating distribution levers — posting cadence, format mix (Reels vs. feed posts), and posting-time consistency — over content-quality changes. A content-quality fix would be the wrong lever here.

HIGH

Close the Apr/Jul/Sep export gaps going forward

Three of nine months in 2026 are marked Unavailable in [the performance table](#), which means this report's year-to-date figures are 6-month totals, not annual ones, and the August-vs-July comparison could not be made at all. Set a recurring monthly export so the next yearly report has a complete run and can support a real month-over-month read for every month.

MEDIUM

Capture total follower count monthly

No follower total was available for any month, so this report substitutes $\text{Interactions} \div \text{Reach}$ for the standard $\text{Interactions} \div \text{Followers}$ engagement rate (see the glossary). That substitution structurally reads higher than the industry benchmark and isn't directly comparable to it. Recording a monthly follower snapshot would enable a true followers-based engagement rate and a net (not gross) follower growth rate in future reports.

MEDIUM**Investigate whether June's rebound is repeatable**

June was the only reported month where reach, impressions, and interactions per day all rose (+11% to +15% over May, see [performance table](#)). Review what changed in June's posting mix or timing before the next planning cycle, since it's the only data point in this report showing what a recovery looks like.

Glossary

Definitions

Reach
Distinct accounts that saw any content from this account in the period (source column: Accounts Reached).

Impressions
Total number of times content was displayed, including repeat views by the same account.

Interactions
Likes, comments, shares, and saves combined, as reported in the export's Interactions column.

Profile Visits
Number of times the account's profile was visited.

New Follows (gross)
New follows gained per day, as reported. This is a gross count — it is not net of unfollows, and no unfollows or total-follower-count column was present in the supplied exports.

Engagement Rate (this report)
Interactions ÷ Reach, expressed as a percentage. This is a substitute for the standard Instagram engagement-rate formula (Interactions ÷ Followers) because no follower-count data was supplied for any month. It will typically read higher than a followers-based rate, since reach is usually smaller than total followers. Do not compare this report's engagement rate directly against a followers-based benchmark or a prior report that used followers as the denominator.

Derived measures

Measure	Formula
Engagement rate (%)	Interactions ÷ Reach × 100 (substituted for Interactions ÷ Followers — no follower-count data supplied)
Per-day rate	Period total ÷ number of days with data in that period
Change vs. comparison (%)	(current per-day rate – prior per-day rate) ÷ prior per-day rate × 100
Change, engagement rate (pt)	Current period engagement rate – prior period engagement rate, in percentage points
6-month total	Sum across the six reported months only (Jan, Feb, Mar, May, Jun, Aug); Apr, Jul, Sep are excluded, not zero-filled

Benchmark sources

Instagram Engagement rate (Interactions ÷ Followers): ~0.30%–0.48% — Quid 2026 (0.30%) / Socialinsider 2026 (0.48%) — NOT directly comparable to this report's Interactions ÷ Reach figure (2.04% YTD); different denominator, shown for reference only.

Data notes

- Data supplied: raw daily Instagram Insights exports for January, February, March, May, June, and August 2026 (6 of 9 months elapsed in the year to date). April, July, and September 2026 exports were not supplied and are

marked Unavailable throughout — no value for these months was estimated or interpolated.

- No total-follower-count data was supplied for any month. Engagement rate in this report is computed as $\text{Interactions} \div \text{Reach}$, not the standard $\text{Interactions} \div \text{Followers}$, and is not directly comparable to the followers-based industry benchmark cited in this glossary. This substitution was agreed with the account owner for this report.
- 'New Follows (gross)' is a one-directional daily count with no corresponding unfollows or total-follower column in the export, so no net follower-growth figure could be computed.
- No content-type segmentation (Feed / Reel / Story / Carousel) was present in the supplied exports, so this report has no segment breakdown table.
- No ad spend or monetization data was supplied, so no ROI or cost-per-result metrics are included.
- Row-level month-over-month change markers in the performance table compare each reported month to the most recently available reported month, not necessarily the prior calendar month: March's marker compares to February (adjacent), but May's marker compares to March (April is missing) and August's marker compares to June (July is missing). Change is computed on the per-day rate in every case to control for different month lengths.
- KPI card change markers compare August (the most recently reported month) against the average of the two available prior months, June and May — the closest available approximation of this skill's default trailing-two-period comparison window, since July's export is missing.
