

TikTok performance report

Northbridge Coffee · August 2026, compared against July 2026, June 2026

Data source	TikTok Analytics export — tiktok_export_2026-08.csv (daily, Aug 1–31, 2026)
Currency	N/A (no monetization data in export)
Prepared	2026-09-30

Executive summary

VIDEO VIEWS 1,177,342 37,979/day / day	TOTAL INTERACTIONS 56,103 1,809.8/day / day	ENGAGEMENT RATE (VIEW-BASED) 4.77%	GROSS NEW FOLLOWS 1,806 58.3/day / day	AVG. COMPLETION RATE 62.6%
---	--	--	---	--------------------------------------

Key findings

- August generated [1,177,342 video views](#) across 31 days (37,979/day), with viewership concentrated early in the month — [August 2 alone drew 50,343 views](#), the highest single day of the period, nearly double the month's low of 23,792 on Aug 10.
- View-based engagement rate reached [4.77%](#), ahead of TikTok's 2026 industry benchmark of ~4.2% (Socialinsider). Follower-based engagement rate could not be calculated because total follower count is not present in this export.
- Total interactions were [56,103 \(1,809.8/day\)](#), made up of [87.4% Hearts](#), [8.7% Reposts](#), and [3.9% Comments](#). Shares are not captured in this export and are excluded from the total, so this figure understates full engagement relative to a period where Shares data is present.
- The account added [1,806 gross new followers](#) in August (58.3/day). Net follower growth cannot be reported because the export does not include an unfollows figure.
- No June or July 2026 exports were supplied, so month-over-month and quarter trend cannot be assessed this cycle — see the [3-month comparison window](#), where both prior periods are marked Unavailable rather than estimated.

August 2026 Performance — Full Metric Comparison

Metric	August 2026 (31 days)	Per Day	July 2026	June 2026
Video Views	1,177,342 —	37,979	Unavailable	Unavailable
Hearts (Likes)	49,012 —	1,581	Unavailable	Unavailable
Comments	2,198 —	70.9	Unavailable	Unavailable
Reposts	4,893 —	157.8	Unavailable	Unavailable
Shares	Unavailable	Unavailable	Unavailable	Unavailable
Total Interactions (Hearts+Comments+Reposts)	56,103 —	1,809.8	Unavailable	Unavailable
Gross New Follows	1,806 —	58.3	Unavailable	Unavailable
Net Follower Growth	Unavailable	Unavailable	Unavailable	Unavailable
Avg. Completion Rate	62.6% —	N/A (rate)	Unavailable	Unavailable
Engagement Rate (view-based)	4.77% —	N/A (rate)	Unavailable	Unavailable
CTR	Unavailable	Unavailable	Unavailable	Unavailable

Visual analysis

Exhibit 1 — Daily Video Views — August 2026 (day of month)

Views peaked on Aug 2 at 50,343 — the month's single highest day — and bottomed out on Aug 10 at 23,792.

Exhibit 2 — View-Based Engagement Rate vs. Benchmark

August's 4.77% view-based engagement rate outperformed TikTok's 2026 industry benchmark of 4.2% (Socialinsider).

Exhibit 3 — Composition of Interactions — August 2026

Hearts drove 87.4% of total interactions, followed by Reposts (8.7%) and Comments (3.9%); Shares are not captured in this export.

Analysis

Because June and July data were not supplied, this report cannot attribute August's performance to a month-over-month change — see the [comparison window](#), where both prior months are shaded as not supplied rather than interpolated. The most useful read on August is therefore intra-month: [daily views](#) ranged from 23,792 (Aug 10) to 50,343 (Aug 2), a swing large enough that a single strong day materially shapes the monthly total. Aug 2 also carried above-average Hearts (2,619) and Reposts (206), consistent with a single piece of content driving a disproportionate share of the month's reach.

Within total interactions, [Hearts account for the large majority \(87.4%\)](#), with Reposts contributing a further 8.7% and Comments 3.9%. Because this export has no Shares column, the [56,103 interaction total](#) is Hearts + Comments + Reposts only; it should not be compared directly to a period or account where Shares are included, as that would understate this account's relative standing. The [4.77% view-based engagement rate](#) already clears TikTok's 2026 benchmark of ~4.2% even on this narrower interaction total, which is a reasonably strong signal for content quality, though it cannot be checked against a follower-based rate without a total-follower figure.

Recommendations

1 (HIGH)

Start retaining monthly TikTok exports going forward

Every metric in the [3-month comparison window](#) outside August is Unavailable because June and July exports were never saved. Save each month's export as it's produced so the September report can show a real trailing 3-month trend instead of another single-period snapshot.

2 (HIGH)

Study and repeat the Aug 2 format

Aug 2 produced [50,343 views, 2,619 Hearts, and 206 Reposts](#) — the month's best day on every count. Identify what made that post distinct (format, hook, posting time, sound) and test repeating it, since a single day's performance is currently shaping the monthly average this heavily.

3 (MEDIUM)

Lean into the current content mix while it's beating benchmark

View-based engagement of [4.77% is already ahead of TikTok's 4.2% benchmark](#). Maintain current posting cadence and format mix rather than making major changes; re-check this comparison next month once a real trend line exists.

4 (MEDIUM)

Confirm whether Shares data can be exported

This export has no Shares column, so the [interaction total and engagement rate](#) exclude Shares entirely rather than reporting them as zero. Check TikTok's export options (or Business Suite settings) for a Shares field so future reports capture full engagement and CTR can also be assessed once impressions/profile-view data is available.

Glossary

Definitions

Video Views

Total video plays in the period (export column: Vid Plays).

Hearts

TikTok's term for Likes (export column: Hearts).

Reposts

TikTok's native repost feature — content re-shared to the reposter's own profile. Distinct from Shares, which is a separate, unexported feature in this file.

Shares

Not present in this export. Not assumed to be zero, and not the same feature as Reposts.

Gross New Follows

New followers gained in the period, before subtracting unfollows (export column: New Follows).

Net Follower Growth

Gross follows minus unfollows. Not available — this export has no unfollows figure.

Avg. Completion Rate

Average % of each video watched through to completion (export column: Avg Watch %).

Engagement Score

A TikTok-provided composite score present in the export (Aug average: 72.9/100). Its methodology isn't documented by TikTok and it doesn't map to a metric this report computes, so it is not used in this report.

Derived measures

Measure	Formula
Total Interactions	Hearts + Comments + Reposts (Shares excluded — not present in export)
Engagement Rate (view-based)	Total Interactions ÷ Video Views × 100
Per-day rate	Period total ÷ days in period (31 for August)
Share of interactions	Component (Hearts/Reposts/Comments) ÷ Total Interactions × 100

Benchmark sources

TikTok Engagement rate, view-based: ~4.2% — Socialinsider 2026 Social Media Industry Benchmarks

Data notes

- Only one export was supplied: tiktok_export_2026-08.csv, covering August 1–31, 2026 (31 days). No June or July 2026 exports exist, so both prior periods in the default 3-month comparison window are marked Unavailable rather than estimated or interpolated.
- Reposts vs. Shares: confirmed with the account owner that this export's 'Reposts' column is TikTok's native repost feature (content that appears on the reposter's own profile), a feature distinct from Shares. The export has no Shares column; Shares is reported as Unavailable, not assumed to be zero.

- Total Interactions = Hearts + Comments + Reposts. Because Shares are unavailable, this total and the derived engagement rate are understated relative to a period or account where Shares data is present.
- New Follows is a gross count. The export has no unfollows figure, so Net Follower Growth is Unavailable.
- No impressions, link-click, or profile-view data is present, so CTR is Unavailable.
- Follower-based engagement rate (interactions ÷ total followers) is Unavailable because the export has no total-follower figure; only the view-based rate (interactions ÷ views) is reported.
- The export's 'Engagement Score' column (TikTok's own composite metric, Aug average 72.9/100) does not map to any metric this report computes and is not used here.
- No ad spend or monetization data is present, so ROI/cost-per-X metrics are omitted.
