

Facebook performance report

Page · August 2026, compared against July 2026, June 2026

Data source	facebook_export_2026-06.csv, facebook_export_2026-07.csv, facebook_export_2026-08.csv, facebook_segments_2026-08.csv
Currency	USD
Prepared	2026-10-03

Executive summary

VIEWS 12,401,581 ▼ -7.9% per day vs. July 400,051 / day	REACH 8,681,092 ▼ -7.9% per day vs. July 280,035 / day	INTERACTIONS 170,003 ▼ -1.3% per day vs. July 5,484.0 / day	ENGAGEMENT RATE 1.96% ▲ +0.13pt pt vs. July (reach-based)	NET NEW FOLLOWERS 3,708 ▼ -1.6% per day vs. July 119.6 / day
--	---	--	---	---

Key findings

- Reach and views both fell 7.9%/day from July to August, but interactions dipped only 1.3%/day, pushing the reach-based engagement rate to 1.96% — the best of the three months [Views & reach trend](#), [Performance table](#).
- Reels drove a disproportionate share of monetization: 33% of August views but 44% of interactions and 44% of revenue, versus Photos' 50% of views for 47% of revenue [Segment breakdown](#), [Revenue by segment](#).
- A single day, August 16, produced 5.4% of the month's total interactions on its own — 66% above the daily average [Daily interactions](#).
- Net new followers softened to 3,708 (119.6/day) from July's 3,769 (121.6/day); the drop is fully attributable to fewer gross follows, not more unfollows [Performance table](#).
- August's 1.96% reach-based engagement rate cannot be benchmarked against Facebook's published 0.15% follower-based default because total follower count isn't in the export [Engagement rate vs. benchmark](#).

Performance table — August 2026 vs. prior two months

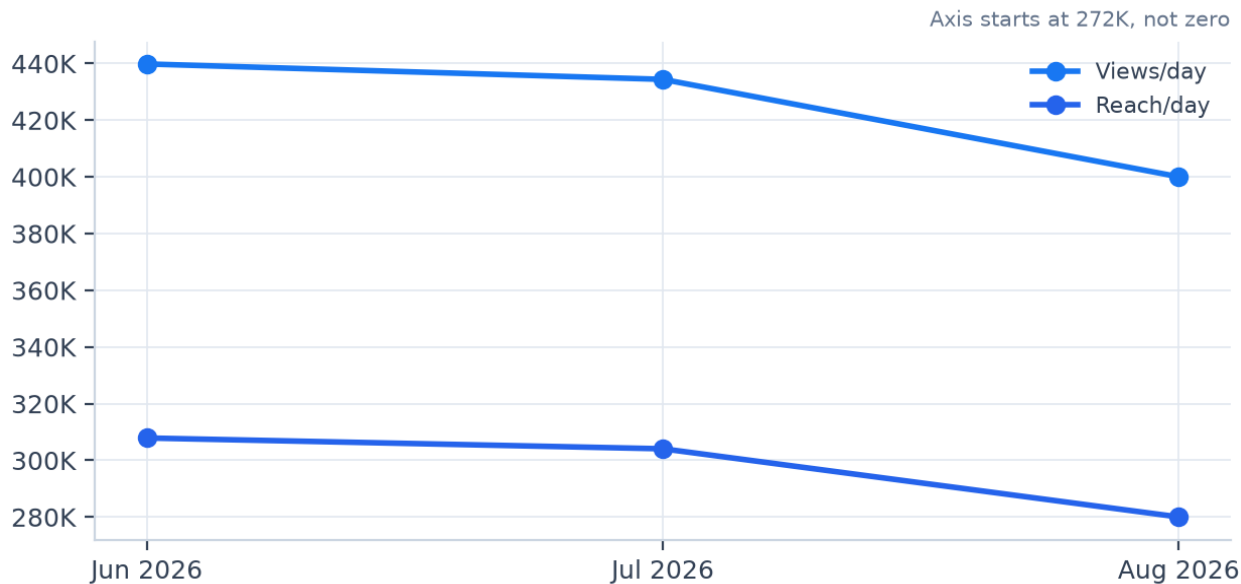

Metric	August 2026	July 2026	June 2026
Views	12,401,581 total / 400,051.0/day ▼ -7.9%	13,466,434 total / 434,401.1/day	13,195,187 total / 439,839.6/day
Reach (unique viewers)	8,681,092 total / 280,035.2/day ▼ -7.9%	9,426,492 total / 304,080.4/day	9,236,618 total / 307,887.3/day
Interactions	170,003 total / 5,484.0/day ▼ -1.3%	172,156 total / 5,553.4/day	168,585 total / 5,619.5/day
Engagement rate (interactions / reach)	1.96% ▲ +0.13pt	1.83%	1.83%
Gross follows	5,510 total / 177.7/day ▼ -1.2%	5,579 total / 180.0/day	5,478 total / 182.6/day
Unfollows	1,802 total / 58.1/day ▼ -0.4%	1,810 total / 58.4/day	1,814 total / 60.5/day
Net new followers	3,708 total / 119.6/day ▼ -1.6%	3,769 total / 121.6/day	3,664 total / 122.1/day
Page visits	Unavailable	51,754 total / 1,669.5/day	54,268 total / 1,808.9/day
Link clicks	31,114 total / 1,003.7/day ▼ -3.9%	32,368 total / 1,044.1/day	33,613 total / 1,120.4/day
CTR (link clicks / impressions)	Unavailable	Unavailable	Unavailable

Content segment breakdown — August 2026

Segment	Views	Share of views	Interactions	Share of interactions	Engagement rate	Revenue	Share of revenue
Photos	6,200,790	50.0%	71,401	42.0%	1.15%	\$1,865.20	47.0%
Reels	4,092,521	33.0%	74,801	44.0%	1.83%	\$1,746.14	44.0%
Text	992,126	8.0%	8,500	5.0%	0.86%	\$198.43	5.0%
Live	1,116,142	9.0%	15,300	9.0%	1.37%	\$158.74	4.0%

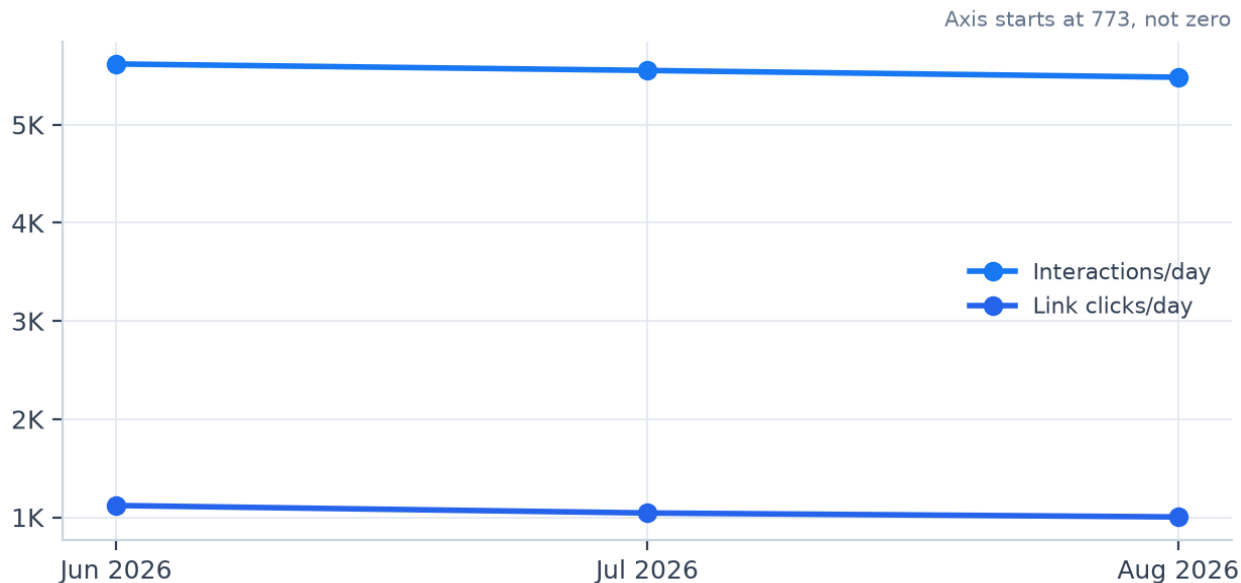

Visual analysis

Exhibit 1 — Views & reach per day, Jun–Aug 2026

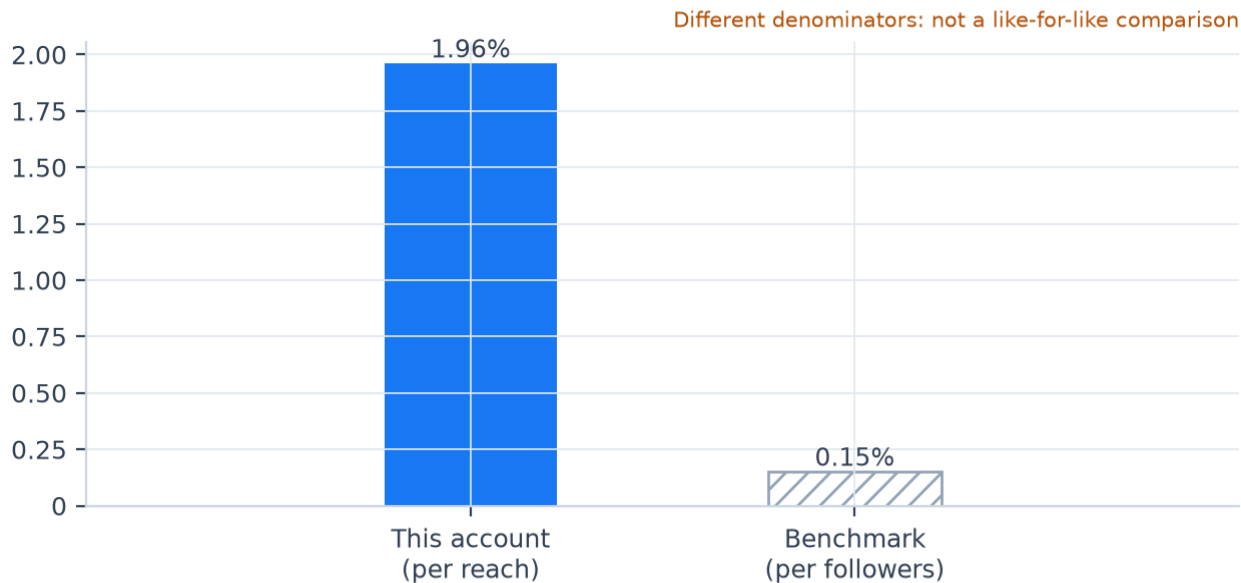

Views and reach fell together (both -7.9%/day from July to August) while the views-per-reach ratio held constant at ~1.43 — the decline is a reach/distribution issue, not a drop in content quality. [See performance table](#)

Exhibit 2 — Interactions & link clicks per day, Jun–Aug 2026

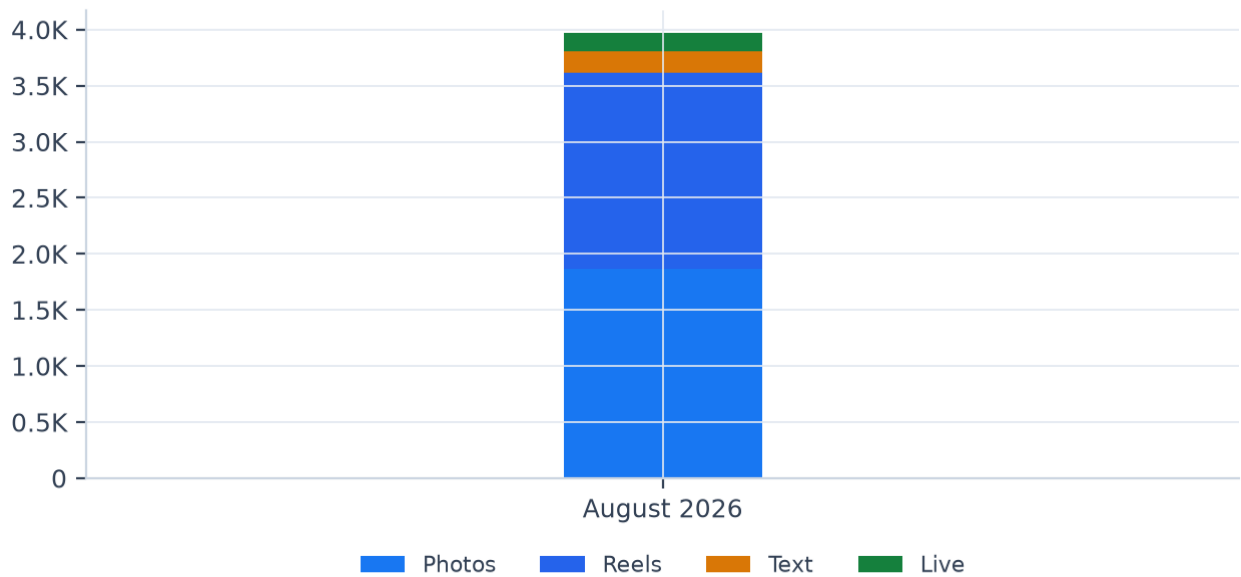

Interactions held up far better than views (-1.3%/day vs. -7.9%/day), which is why August's engagement rate is the best of the three months. [See engagement rate vs. benchmark](#)

Exhibit 3 — Engagement rate vs. Facebook benchmark, August 2026

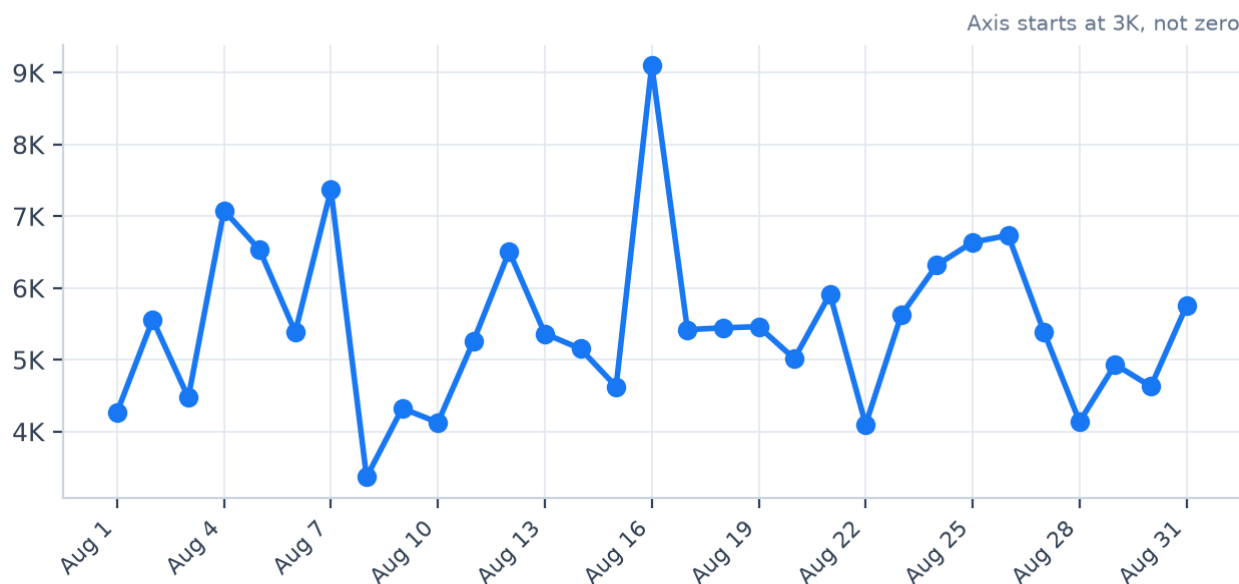

This account's reach-based rate (1.96%) isn't comparable to Rival IQ's 0.15% follower-based default — the export has no total-follower count to compute a like-for-like rate. [See performance table](#)

Exhibit 4 — Revenue by content segment, August 2026

Reels generated 44% of August revenue from just 33% of views — the highest revenue-per-view of any segment. [See segment breakdown](#)

Exhibit 5 — Daily interactions, August 2026

August 16 alone produced 9,106 interactions (66% above the month's daily average of 5,484); August 8 was the quietest day at 3,365. [See performance table](#)

Analysis

The headline story in August is a reach contraction, not an engagement problem. Views and reach both dropped 7.9% per day versus July [Performance table](#), but the views-per-reach ratio was essentially identical across all three months (~1.4286 in June, July, and August — [Views & reach trend](#)), meaning each person reached saw the same number of views each time. Fewer people were reached; the content shown to them performed the same or slightly better.

Interactions fell far less than views (-1.3%/day vs. -7.9%/day — [Interactions & link clicks trend](#)), so the reach-based engagement rate actually rose to 1.96% in August from 1.83% in July and June (+0.13pt). Because the export doesn't include a total-follower count, this rate can only be benchmarked on a reach basis, and Facebook's commonly cited 0.15% default is follower-based — nearly 13x lower by methodology alone, not performance — so no over/under-performance claim is made here [Engagement rate vs. benchmark](#).

On follower growth, net new followers fell 1.6%/day from July to August. Decomposing the change: gross follows per day dropped from 179.97 to 177.74 (-2.23/day), which more than fully explains the net decline; unfollows per day also eased slightly, from 58.39 to 58.13 (-0.26/day), which cushioned the net decline by about 13%. In short, softer top-of-funnel discovery, not a retention problem, is driving the slower follower growth [Performance table](#).

At the content level, August's segment data (supplied for August only, so no month-over-month segment comparison is possible) shows Reels converting views to revenue roughly 1.6x as efficiently as Photos (Reels: 44% of revenue from 33% of views; Photos: 47% of revenue from 50% of views) [Segment breakdown](#), [Revenue by segment](#). Text and Live remain minor contributors at 5% and 4% of revenue respectively.

A single day, August 16, posted 9,106 interactions against a monthly daily average of 5,484 (+66%) and 508,993 views, the month's highest. That one day contributed 5.4% of August's total interactions [Daily interactions](#). August 8,

by contrast, was the softest day at 3,365 interactions (-39% vs. average).

Recommendations

HIGH

Shift incremental content investment toward Reels

Reels converts views to revenue at roughly 1.6x the rate of Photos (44% of revenue from 33% of views vs. Photos' 47% from 50%). Increasing Reels' share of the content mix is the fastest lever to grow revenue without needing more total reach [Segment breakdown](#).

HIGH

Reverse-engineer the August 16 spike

August 16 generated 66% more interactions than an average August day and was the single-largest contributor (5.4%) to the month's interaction total. Identify what was posted that day and test whether the format or topic is repeatable [Daily interactions](#).

MEDIUM

Investigate the reach decline before assuming a content problem

Views and reach fell together while views-per-reach stayed flat at ~1.43 across all three months, so this is a distribution/reach issue (algorithmic or posting-frequency related), not declining content quality — engagement on the content that was shown actually improved [Views & reach trend](#).

MEDIUM

Diagnose the softer gross-follow rate

The net follower slowdown (3,708 vs. 3,769, -1.6%/day) is fully explained by fewer gross follows (-2.23/day), not by rising unfollows, which actually eased slightly. Treat this as a top-of-funnel/discovery question rather than a retention one [Performance table](#).

LOW

Request Impressions and total-follower-count fields in future exports

CTR (link clicks / impressions) is Unavailable this month because no export included an Impressions column, and engagement rate could only be computed on a reach basis because total follower count wasn't present either — both are needed for benchmarkable, like-for-like comparisons going forward [Performance table](#).

Glossary

Definitions

Views

Total number of times content from the Page was displayed, summed daily.

Reach (unique viewers)

Number of unique people who saw content from the Page, summed daily.

Interactions

Reactions, comments, shares, and other engagements on Page content, summed daily.

Net new followers

Gross follows minus unfollows for the period.

Engagement rate (this report)

Interactions divided by reach (unique viewers), expressed as a percentage. Computed this way because the export includes reach but not a total-follower count.

Derived measures

Measure	Formula
Per-day rate	Period total ÷ days in period
Engagement rate (%)	Interactions ÷ Reach × 100
Net new followers	Gross follows – Unfollows
Share of period total (%)	Segment value ÷ period total for that metric × 100
Change vs. comparison period (%)	(Current – Prior) ÷ Prior × 100, computed on per-day rates; suppressed (shown as —) if prior value < 50
CTR (%)	Link clicks ÷ Impressions × 100 — Unavailable this report; no export included an Impressions column

Benchmark sources

Facebook Engagement rate (interactions ÷ followers): ~0.15% — Quid/Rival IQ 2026 Social Media Industry Benchmark Report

Facebook CTR (link clicks ÷ impressions): ~0.90% avg, 1.5-2.5% good, >2.5% excellent — Industry compilation, 2025-2026

Data notes

- No account/page name was present in any supplied export; "Page" is used as a placeholder label in this report.
- Three daily exports were supplied: facebook_export_2026-06.csv (30 days), facebook_export_2026-07.csv (31 days), facebook_export_2026-08.csv (31 days), plus facebook_segments_2026-08.csv (content-segment breakdown for August only).

- The August daily export did not include a Visits column (present in June and July); Visits is marked Unavailable for August rather than estimated.
- No export included an Impressions column, so CTR (link clicks ÷ impressions) is Unavailable for all three months.
- No export included a total page-follower count, so engagement rate is computed on reach (unique viewers) rather than followers; it is shown against the Facebook benchmark with denominators labeled, and no over/under-performance verdict is given due to the mismatch.
- Segment-level data (Photos/Reels/Text/Live) was supplied only for August; no June or July segment files were provided, so a month-over-month segment comparison could not be made.
- Segment totals reconcile against the daily August export within rounding: segment Views sum to 12,401,579 vs. 12,401,581 from the daily file; segment Interactions sum to 170,002 vs. 170,003 from the daily file (differences of 2 and 1, consistent with per-post rounding in the segment export).
- No ad-spend data was supplied, so ROI/cost-per-X metrics are not included.
